DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 17-22, drawn to a method of depositing by SACVD, classified in class 438, subclass 778.
- II. Claims 6-16, drawn to a deposition reactor for performing SACVD, classified in class 118, subclass 719.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be manufactured by a materially different apparatus that could comprise a separate feed conduit where a gas is treated with microwaves, a second feed conduit for a reaction gas, and a third feed conduit for a second reaction gas, where the amount of gases are controlled depending on the amount of radicals produced by the microwave treated gas conduit.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
